

Risk-Management - Digitalization - Visualization

Synofin Risikomanagement AG

was founded in 2013 and is supervised as a AIFMG-Risk Manager by FMA Financial Market Authority Liechtenstein. A powerful network of experts in risk-management, financial mathematics and software engineering provide risk-management solutions and services for banks, funds, asset manager and insurance companies in Liechtenstein, Switzerland, Germany and Austria.

RiskMan

is a ISAE3000 certified software, specially designed for the purpose of risk management using web-technology for easy handling with customized interfaces and role-based access for efficient workflow-driven interaction between Asset-, Risk- and responsible Board Managers. The data-Interface for all financial instruments is predefined and allows powerful data management with automatical enrichment of missing data. Calculation engine „Worst-Case-Finder“ is developed in Austrian National Bank and delivers exact and stable results at fund and even instrument level.

Output is available online, on customized standard-reports, files of any format and dashboards.

Visual-Qi

is a 3D visualization tool that supports you and your clients to make the right decisions fast and stay ahead of the curve. It allows the user to immediately understand the key information by providing a simple view of abstract and complex data.

Available as an extension for Synofin Riskman, Visual Qi is a product created by ARdictive s.a.s., a Paris based company. We focus on using augmented reality technology in the service of understanding and transmission for a maximum impact.

Risk management takes the next step

Increasing market dynamic leads to complex financial products to be launched in short time. Interaction between asset manager, risk manager and investor gets even faster and has to be efficient and transparent.

New technologies and concepts are available now

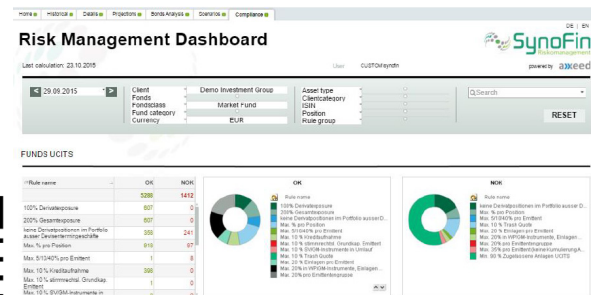

based on powerful calculation engines, work-flows and databases the new visualization tools enforce specialists to communicate visually, dynamic and interactive.

Network of Fin-Techs did it

According to response of customers in daily practise the network of fintechs for riskmanagement, digitalization and visualization combined new technologies for an integrated solution.

RiskMan Dashboard
